Professional Summary

- Over 12+ years of strong professional experience with Microsoft development technologies and have worked in Asp.Net MVC, Web API, C#, .Net core and .Net 8
- Involved in various phases of Software Development Life Cycle (SDLC) i.e. Analysis, Design, Development, Implementation and Testing.
- Experience in client-side technologies JavaScript, Angular and TypeScript.
- Extensive experience in building health care applications using C#.
- Well versed in Agile environment and scrum ceremonies.
- Experience in Test Driven Development (TDD) using VS Unit testing and xUnit.net.
- Actively use AI-powered tools including GitHub Copilot and Claude in day-to-day development to accelerate coding, improve code quality, and streamline problem-solving.

Skills

- **Backend:** C#, .NET 8, .NET Core, REST API, MVC, Entity framework, LINQ, Dapper, Microservices, CQRS
- **Frontend:** Angular, TypeScript, JavaScript, jQuery, HTML, CSS
- **Cloud:** Azure App Services, Azure Functions, Blob Storage, Logic Apps
- **Tools:** Git, TFS, Docker, GitHub Copilot, Claude (AI)
- **Database:** Microsoft SQL Server

Work Experience

Senior Software Engineer (FIS - Mohali) | May 2021 – Present

- Developed and maintained secure, scalable RESTful APIs in ASP.NET Core by migrating business logic from legacy systems into .NET 8 using Clean Architecture and CQRS. In addition worked closely with the UI team to integrate APIs with Angular applications, ensuring smooth functionality and data flow.
- Built a centralized trigger-based email template service to handle key events in applications and is being consumed by multiple services.
- Worked directly with the Security team to identify and prioritize vulnerabilities from security scans, then conveyed findings to the development team — resulting in timely remediation and improved overall code security. Also drove code quality improvements through structured code reviews and ensured adherence to development, testing, and deployment best practices.

Engineer II (Becton Dickinson – Chandigarh (2017 July to 2021 May))

- Worked on reporting web portal (MKP & KPassist) which helps in managing and tracking facility (hospital) for medication inventory, medicine discrepancies and other crucial indicators like MedStations usage (medicines dispensed, tracking) data using C#, ADO.NET, JavaScript and jQuery.
- Worked on CDRM 1.0 release (internal tool) to integrate it with IDM/CIDM authentication in .NET Core 3.1 and EF core and introduced logging using Serilog.
- Wrote the Unit test cases and maintaining the code coverage to the required benchmark and introduced detailed logging to easily identify issues.
- Involved in code reviews and technical documentation for the product

Programmer Analyst (Drish Infotech – Chandigarh (2015 - 2017))

- Built a real estate web application in Angular, JavaScript, Web API and Entity Framework.
- Developed UI using Angular
- Interaction with clients, other technical teams to collect requirement, identify tasks and provide the estimates.
